WORLD HAPPENINGS BRIEFLY TOLD

Canadian farm lands in occupation in 1927 are valued at an average of 258 per acre in a Government crop report just issued.

The Winnipeg Presbytery of the United Church has adopted a resolution in favor of the ordination of women to the ministry.

Julius Caesar Joseph Lapierre, a Belgian, accused of being a German spy during the Great War, was found guilty at Paris, and sentenced to life imprisonment in a fortress.

The Washington government appears unfavorable to any proposal for another conference of the great powers on naval disarmament before 1931.

Premier Taché brought a bill down in the Quebec legislative assembly which would grant municipalities the right to prohibit sign-boards advertising alcoholic liquor.

That the Canadian National Railway would, in the near future, purchase the Western Union Telegraph lines in the Maritime provinces, and add them to their former system, was the report current in Montreal.

Hon. T. M. Wilford, former Minister of Justice and leader of the New Zealand Liberal Party, arrived in Vancouver about noon yesterday to make a study of Canadian conditions generally.

A. L. Joffe, chief commissioner of immigration, has left Ottawa for Great Britain to investigate the complaints which have come to the department in regard to the new medical inspection service. Mr. Joffe will be gone several weeks.

The population of Saskatchewan as at June 1, 1926, was 820,738, an increase in the five-year period from the quinquennial census of 1921, of 63,228, according to the report issued by the Dominion Bureau of Statistics.

Some men before 18. There are many who have been afflicted with sore and have driven them away with Dr. Thomas' Eucalypti. All similarly troubled should lose no time in trying this remedy. There is nothing like it to be had. It is cheap, but its power is so great it may be expressed by its low price.

U.S. Tariff Against

Canadian Cream

Increase of Fifty Per Cent. May Go Into Effect Soon

The United States tariff increase of 50 per cent. on cream, against "Canadian milk and cream will likely go into effect," said J. C. Armstrong, of Montreal, just back from Washington, where he represented the National Dairy Council of Canada at the United States tariff commission hearing regarding dairy products. Mr. Armstrong stated that the methods used by the investigators of the commission in making a comparative cost studies were not correct as regards Canada, and he was successful against remarks made by some of the speakers at the hearing to the effect that the standard of living among Canadian farmers was not up to that of the United States farmer.

The Least Excitement Made Her Heart Palpitate and Flutter

Mr. Ambrose O'Connell, Highgate, Ont., writes: "I suffered for some time with a bad heart which seemed to be controlled by my nerves. The least little excitement would cause my heart to palpitate, and at times I would feel as if my heart had just been torn out. I was in this way for some time when, one day, I saw

an advertisement, as I decided to try them. I had only taken a few pills when I felt that I was getting better. I continued taking them and in a short time my heart had entirely returned to normal.

W. N. U. 1724

Population of Saskatchewan

Given As 820,738 As At June 1st, 1926

The population of Saskatchewan as at June 1, 1926, was 820,738, an increase in the five-year period from the quinquennial census of 1921, of 63,228, according to the report issued by the Dominion Bureau of Statistics. In this total, males exceeded females by 72,134. The rural population of the province was more than double the urban, the figures being 374,206 and 242,522 respectively. The urban population was distributed among seven cities, 80 towns and 260 villages.

Nearly 45 per cent. of the population was born within the province itself, while of the 820,738 persons in Saskatchewan, 451,548 were of British origin. Native-born Canadians comprised 325,472, those from other British possessions 1,000.

Of the foreign-born citizen, numbering 180,190, or nearly 24 per cent., Russia was the largest contributor with 17,227, Austrians were third with 11,584, and Ukrainians third with 10,067. The province had 8,261 Galicians, 7,356 Germans, 8,210 Norwegian, 7,252 Swedes, and 2,069 Danes. There were 2,138 Austrians, when Chinese furnished 2,719 and Japanese 87.

Illiteracy was greatest among the foreign-born, there being 19.28 per cent. over 10 years old without letters; Canadian-born furnished 2.95, and British-born, .21.

The Sun Life

More Financially Established On A Sound Basis Than Ever Before

One of the most encouraging signs of the times for Canada is the substantial progress that continues to be made by our great banking and insurance institutions. The Sun Life Assurance Company of Canada has done record business during the past year, and its position is today more firmly established upon a sound financial basis than ever before in its history. When Canadians reflect upon the strength and solidity of their banks and their insurance companies, the desire that these shall always remain Canadian is uppermost. It is indeed in the highest interests of the nation that they should never pass under foreign control. Canada needs capital, but not to be devoted to swamping up our national identity. Montreal Star.

Replacing Three Plain Glass Windows

Three of the largest plain glass windows in England are to be replaced with the Oxford Street frontage of Messrs. P. J. Robinson, Ltd. The windows, with two others of smaller size, have been slatted with a diamond, and in many instances, the thickness of the glass is no more than 1/4 inch, which glass is set completely through.

It has become necessary to replace the windows, says an official of the Employers' Liability Insurance Corporation.

Owing to the police regulations the week-end is the only time the work can be done. "Three of the windows to be fitted are the largest in England, each having a dimension of about 21 feet by 16 feet, and have had to be specially manufactured to rough order of £100 a pane.

Round World Race

By Six Newspapers

European Press Celebrating Centenary Of John Verne's Birth

A globe encircling race between representatives of six European newspapers, which will follow the route of Princess Foye in John Verne's "The Story of the Eighty Days," will be a striking feature of the 100th anniversary of the birth of the imaginative French writer, who was born in Nantes, France, February 9, 1828.

The participants who started March 5, were to choose their own means of transportation, but they must follow the route Paris to Bristol, San Francisco, San Francisco, New York, Liverpool, London to Paris.

LESSON No. 19

Question: Why is emulsified cod-liver oil so wonderful a food-food for young girls and women?

Answer: Because it abounds in nourishing factors that are particularly beneficial to people prone to anemia and other conditions due to malnutrition.

Keep your system vitamin-nourished—take

SCOTT'S EMULSION

Invention Of Canadian

Control Device For Airplanes

Mr. Turnbull is negotiating with New York manufacturers for the national rights to his invention which is covered by patents and patent applications.

His method of varying the pitch of a propeller to control the necessary gears by a small electric motor and a hand switch, which makes the device "lost proof."

Turnbull, who has been working on his propeller twelve years, said the pitch could be changed from positive angles to negative angles, and that the motor actually would back up, a feature of great value on airplanes. Mr. Turnbull says his propeller will add 70 to 100 per cent. to the climb of an airplane, thereby making it possible for commercial planes to carry less fuel and more payload, and with greater safety and save 25 to 30 per cent. in fuel in long flights.

Mr. Turnbull, who has been working on his propeller twelve years, said the pitch could be changed from positive angles to negative angles, and that the motor actually would back up, a feature of great value on airplanes. Paris Plans Novel Campaign

Will Photograph Notes Of Auto Horns and Classify Them

The noise of Paris automobile horns is being photographed by a novel method as part of the campaign to quiet Paris.

The police are doing it. They have classified noise three ways. Agreeable noise, almost harmonious; agreeable noise; and disagreeable noise.

Instead of using its ears to judge the varying degrees and qualities of harmony in the noise of automobiles the police have adopted a camera which transforms sonorous vibrations into luminous vibrations and then takes pictures of them. It is a comparatively easy matter to compare photographs with a standard photograph of an agreeable noise.

For the time being, the police are testing various makes of horns and classifying them as more desirable or undesirable. Eventually they will forbid use of the latter. Later, if a policeman hears a disagreeable horn, he will send the driver to have his noise photographed. A stiff fine awaits an unsatisfactory photographic proof.

The camera does away with the policy of protest on the ground that a policeman's ear is not trained to detect harmony or cacophony.

Paris taxicabs are the principal offenders for they have the loudest horn which has a dissonant effect on unsympathetic ears. Paris has never before had a serious auto-noise campaign and chauffeurs have gone nose to the grindstone. When traffic does not move smoothly or swiftly enough for cars behind, the drivers signal in incessant tooting which adds to the din of Paris streets.

As an ongoing move in the campaign the police have begun to enforce a century-old law which forbids news boys to cry their papers on the streets.

Character In A Laugh

Hearty Laughter May Be Trusted Says Student Of Psychology

"People who laugh heartily may be trusted," said a student of psychology recently. "These people laugh with the vocal chords, and they are usually generous and sympathetic in their nature. A laugh is a sure indication of character. The man who laughs in his throat, with an almost straight face for example, is generally shrewd and cautious, and not always over-credulous in his methods."

"Inside" laughter, the shuffling shoulders express their mirth, are good-natured, and make excellent parents, while those who laugh with out a smile are hard-hearted and cruel. People with little jerky laughs are often of shallow character, and are unable to withstand temptation. They are, however, often mentally brilliant."

"People who laugh explosively and loudly are not the hearty, bluff creatures they are generally believed to be."

"The large-hearted souls are those who laugh but rarely, but whose joy is reflected in eyes, lips and face."

Settlers Should Be Selected

Opening Doors Too Wide Is Not Considered Wise Plan

The United States must stand always as a warning to Canada and an example of what we should not do with regard to immigration. It opened its doors at one time too wide. It paid little or no attention to the selection of immigrants, looking to its melting pot to refine away the dross. But the melting pot failed, and the United States was compelled for its own protection, to adopt far-reaching exclusion laws. These laws, it is hoped, will prevent the mistakes of years. But it is possible they were adopted too late.

R. C. Greese Good Tobacco

Tobacco grown on the B.C. fruitlands property at Kamloops, Southern British Columbia, is in season, is declared by Mr. Holman, B.C. tobacco products expert, to equal any tobacco he has seen anywhere. Farmers in this district intend to engage in tobacco culture in the future.

An old offender, being tried before the Bench, was accused of assaulting his wife.

"Larger?" asked the Magistrate.

"No," answered the prisoner, "I don't want to be any larger."

Agred: "Don't you want your wife's furniture insured against theft?"

Manager: "Yes, all except the clock. Her body would smash it."

A reasonable woman to one who isn't unreasonable all the time.

W. N. N. 1724

HARRY BIRDS

There are some Edmonton, Alta., canaries which live in the open, summer and winter. Their aviary is a simple frame structure with an open wire front and quite unshaded. The bird house is ten up for the night.

BEEES REQUIRE NECTAR

Reason Why Some Localities Better Than Others For Upkeep Of Apiary

Bees may be kept in any locality where there is sufficient nectar to maintain them, writes A. H. W. Birch, apiarist, Central Experimental Farm. Some localities are better than others in that there is a greater variety of flowers or a greater proportion of them; therefore, a larger number of colonies of bees may be kept in one place than in another which is but a few miles away. As good localities are often right at our doors, the smaller bee-keeper with but few colonies has not to bother about seeking for new ones as does the larger bee-keeper when his location is both country and city thorough-out.

In the land, beekeeping is practiced with much pleasure and profit to many. In the fruit-growing districts where insect pollination is of so much importance, the fruit-growers have learned that the honey-bee, the only insect that can be relied on for cross-pollination, benefits them.

On the farm, also, especially where there is an abundance of alfalfa, sweet clover or alfalfa, bees are brought in to pollinate the crops. In the city, bees are kept for the pleasure of the bee-keeper. In the city, bees are kept for the pleasure of the bee-keeper. In the city, bees are kept for the pleasure of the bee-keeper.

World Slowing Up

Earth Rotates With Lessening Speed As Years Roll By

The time will come when the earth will stop spinning and the moon will crash down on it, said Sir Oliver Lodge, noted British scientist, and spiritualist, in a recent lecture on "The Birth of the Moon."

"It will be millions and billions of years hence," he continued, "the speed at which the earth rotates is gradually slowing down owing to the friction of the tides. You need not be nervous. Each day is only 240,000,000th part of a second longer than the day before."

"There was a time when the earth spun so fast that the day was only four hours long. At that time the moon was part of the earth, and it broke away and has moved slowly farther away ever since. In time the earth's rotation will cease, and the process will be reversed."

Knew What She Wanted

A class of children were wrestling with a lesson in arithmetic, and the teacher found that fractions were too much for them. The trouble started when little Doris declared that she would rather have a half a pie than two-thirds of it.

"How often have I tried to divide it into six," said the exasperated teacher, "but two-thirds of anything is more than a half! Now you all know," she went on, "that Doris prefers a small portion of tart to a large piece. Punsy child, isn't she?"

Doris began held up as a model of stupidity, put up her hand. "Well," asked the teacher, sharply, "please, miss," said Doris, in a small, clear, piping voice, "I don't like tarts."

Production of natural gas in Western Canada totaled 11,560,000 cubic feet in 1927 and the production of oil was 229,000 barrels. The province of Alberta is the source of practically all of the natural gas and oil produced in the Canadian West.

Manholes in the skies are built on the installment plan, and each good is a brick used in the construction.

Adrian IV. was the only English Pope.

Whiskey is an accurate means of telling the time.

An Inhabitant

Catching Animals In Steel Traps Should Be Abolished

To keep pace with the tremendous demand for furs that has been created of white recent years, it is estimated that in America alone more than one hundred million fur-bearing animals are caught in steel traps each year and put to death. In a recent issue of The Globe, a correspondent writing to the "Hemlocker," makes a vigorous appeal against the use of these traps. She points out that the Ontario Society for the Prevention of Cruelty to Animals has had a bill framed for two years to do away with this cruel trap and substitute another that will be as efficacious and entail little suffering for the animal that is caught.

Such a humane piece of legislation as this will surely have the hearty approval of every member of Parliament in either the Federal or Provincial Assembly. It is a cruel trap, but it is a steel trap. It is a steel trap that requires any argument to convince him of the inhumanity of this device. Could our legislators in some way be brought to hear the long wail of interable anguish and pain that goes up each year from many millions of creatures of the dumb creation they would not mind the steel trap was placed with the thumb-screw, where it rightly belongs.

House-Hunting By Plane

Australian Flyer Once Bought Home After Inspecting It From Air

Bert Hinkler, who started on a solo flight from Croydon to Australia on Feb. 7 and arrived there, is famous for his daring performances. In 1922 he introduced house-hunting from the air, and bought a seaside home after flying about the Kentish coast. He used a two-seater "baby" plane and took up his wife. This was his second attempt to buy a home.

"We circled all around the house at a low altitude, which is, of course, possible with such a machine. I flew near enough so that my wife and I could see what the bedrooms were like, and we were also able to inspect other rooms."

Hinkler has "specialized" in small places, and it was in a thirty-three-acre Kentish home that he bought a house to make Australia, 13,000 miles, in eight days. He reached Calcutta, 8,000 miles, in eight days. He then decided to cut his time to Australia to fifteen days, and made it. The time of the Smith brothers, Sir Ross and Sir Keith, was twenty-eight days. They travelled in a heavy machine.

Six and a Half Dozen

Mr. Hinkler was an argumentative local councillor, and was cruising an opponent's case. "Gentlemen," he said, "you may say with Councillor Smith, that this is a case of six or one and half a dozen of the other. But I say no, '—'pusses for emphatic.' No! It is nothing of the sort. It is exactly the contrary."

Tomato juice has been found equal to cranberry juice in preventing scurvy among children.

INTRICATE CLOCK AT GREENWICH

Accurate Time Keeping Device Has Free-Swinging Pendulum

His late at last achieved a time-keeping mechanism able to compete with the natural laws of the heavenly bodies! Professor de Sitter, of Leyden University, is a special contributor to "Nature," the scientific journal, suggests that this is possible. He calls attention to wonderful clocks at Greenwich Observatory known as free pendulum clocks. Humanity has been looking for the super-clock, and in the clock known as "Shortt's" the professor thinks it may be found.

"One of these clocks," he said, "has been left entirely to itself, being, however, under rigorous control at the Observatory at Greenwich, during the greater part of the year, and its rate has been absolutely invariable. It looks as if this clock could be depended upon to keep time within a few hundredths of a second for a period measured in years instead of weeks."

They have three of them, Shortt's, their standard timekeeper; Shortt's, which is used in emergency, and one which is used for the wireless signals.

"Recent tests," said the official, "have shown a daily rate remaining constant for more than six months to the order of one-thousandth of a second, and we believe it an advance on any clock previously made. It was constructed to the design of Hamilton Street."

It has a certain amount of work taken out of it before it can get its pulse to continue its swing. A free pendulum clock has no work to do.

"It is a master clock that has a slave clock to work for it. The slave clock is a slave clock, and it is a slave clock that is released electrically by what is termed the slave clock. In its turn the master clock gives out the slave clock."

"This wonderful type of clock has no hands, no face, and shows no time to passers by. It is simply a master clock."

"In a hermetically sealed copper cylinder this robot finger silently marks off the passage of time in space. All its connections are electrical. Its motive power is gravitation."

Flag Over Admiralty

Is Never Lowered Always Kept Flying By King's Decree

Sea Secretary

Do you know why the flag which flutters over the Admiralty in Whitehall is never lowered? This question was asked by one who noticed that during the funeral procession of Earl Haig, while all other flags in the neighborhood were at half-mast, that of the Admiralty was at main-mast.

When approached on the matter members of the Admiralty staff confessed their ignorance on the point. One suggested that it symbolized the fact that the British Navy never surrendered.

The Vice-Admiral, Admiral Sir Vincent Haddock, First Principal Assistant Secretary to the Admiralty, finally solved the problem. "The flag is never lowered," he explained, "because Board of Admiralty never ceases work day or night. King Edward as the head of the Navy, commanded that the flag should always be at main-mast, and it always is."

The flag's design is that of a gold anchor on a red background. It was originally introduced by James Duke of York, afterwards James II, as Lord High Admiral and Lord General of the Navy, and was adopted by the Lords Commissioners in 1723.

The Hoist—"Are you fond of lobster salad, Doctor?"

The Patient—"No, I'm not fond of it, but I'm grateful to be told."

Boat clock marks in Chicago costs the city millions every year.

Rations For Big Egg Yields

Necessary To Follow A Very Careful System Of Feeding

Some excellent egg laying records have been made at the Lethbridge, Alberta, Experimental Station. A record of three hundred eggs was made by one hen, while twenty-seven produced two hundred and fifty eggs, and one hundred and ten four hundred two hundred eggs in the year. To obtain such records it was necessary to follow a very careful system of feeding. The winter scratch ration was made up of two parts of wheat and one part each of cracked corn and crushed oats.

A very small portion of this feed was thrown in the litter in the morning to start the birds scratching. The balance of the scratch feed was given once an hour previous to the birds going to roost. A dry mash which was available to the birds at all times was composed of equal parts of bran, shorts, meal, middlings, corn, meal, and oil cake. The mash was made with the same ingredients as the dry mash, but with the meal, meal and charcoal omitted. This was made up of a quantity made up of the same ingredients as the dry mash, but with the meal, meal and charcoal omitted.

The birds were also fed a moist meal consisting of a quantity made up of the same ingredients as the dry mash, but with the meal, meal and charcoal omitted.

The birds were also fed a moist meal consisting of a quantity made up of the same ingredients as the dry mash, but with the meal, meal and charcoal omitted. This was made up of a quantity made up of the same ingredients as the dry mash, but with the meal, meal and charcoal omitted.

King Richard Lost Chance

Sold Soul Possession and Was Not Commemorated In Stamps

A royal stamp is to be issued to celebrate the baptism of the British occupation of Cyprus, an island whose history goes back to the fifth century B.C. and which is richer in mythology than any other British possession. But what about celebrating the British occupation of Cyprus?

Nearly eight centuries ago Richard I, while on his way to the Third Crusade, landed on the island of Cyprus. The self-styled Emperor of the island came down to the shore and tried to cajole the women into handing him just a morsel of a storm-brewed. Thoroughly frightened, Richard arrived.

He demanded an apology from the Emperor, and, receiving none, assembled his attenuated forces, landed, and conquered the island, and imprisoned the Emperor. But Richard had no use for his new possession, and, being in need of funds, he sold the island to the Templars and proceeded to the Holy Land. Thus he lost his chance of being commemorated in a stamp.

Learn Lesson From Bass

If People Persist Obstacles To Success Usually Disappear

A story is going the rounds of a man who owned a fish-bank divided into two sections by a glass partition. In one side he put a lively bass; in the other number of minnows.

Every time a minnow came to the glass partition the bass made a strike. Then, with a brusque head, the minnow swam around the bass and was not touched. The bass was thoroughly sold on the idea that minnows were bad.

Take another jump at the glass partition. It isn't there.

Norse Convention In Winnipeg

The following Norse organizations in Canada and the United States are planning a great joint convention and reunion to be held in Winnipeg, July 5-12, next. The League of Norwegian Evangelists, Norwegian Evangelists, Danish and Norwegian Free Associations, Norwegian Lutheran Church, Committees are now making arrangements for the gathering. Large delegations are expected from the South.

It isn't in any of the records that a great misadventure was ever caused by the presence of a shoe salesman who plunked himself down beside the writer's desk and remarked: "Don't let me interrupt you go right along with your work."

TWO HUNDRED TRACTORS

To be exact—208. This, the largest shipment of farm implements ever to cross the prairies, was carried through Winnipeg into Saskatchewan and Alberta by the Canadian National Railway. There were 38 cars, with four tractors to a car. The photograph was taken at Melville, Sask. The train was made up of 208 flatcars, and it was a sight to see the train as it moved on its way. The train was a sight to see the train as it moved on its way. The train was a sight to see the train as it moved on its way.
